NOTES

DRILLING OF CRANK ARMS FOR SWITCH

To find drilling for length of crank arm on switch side which will give the required stroke: multiply the required stroke at switch by length of crank arm on lever side and divide by the stroke of the lever.

EXAMPLE:

Throw of Switch Points	5.0"
Lost Motion in Switch Adjustment	1.5"
Required stroke at Switch	6.5"
Length of Crank Arm on Lever Side	11.75"
Stroke of Lever	8.75"

$\frac{6.5" \times 11.75"}{8.75"} = 8.75"$ Approx.

DRILLING OF CRANKS
Lever Side 11.75"
Switch Side 8.75"

SETTING OF COMPENSATORS

When drilling of crank arms at switch are of unequal lengths, the length of pipe "B" to be compensated will not be equal to length of pipe "A". To find length "B" use the following formula:

$$\frac{\text{Length "A" x Length of Crank Arm on Lever side}}{\text{Length of Crank on Switch side}} = \text{Length "B"}$$

or

Given:

Length "A"	32'
Crank on Lever Side	11.75"
Crank on Switch Side	8.75"

Then:

$\frac{32' \times 11.75"}{8.75"} = 43$ Ft. Approx.

With normal crank, length "B" must be added to length of pipe line; with reversed crank it must be subtracted.

The figure in square opposite temperature at time of installation and under the number of feet "L" between crank and fixed point, is the distance "B" or "A" in inches, the crank should be set towards or away from the fixed point.

CRANK CHART

DIRECTIONS FOR USING COMPENSATION CHART

Ascertain the mean temperature in degrees F. of the locality in which the chart is to be used. Mark the vertical line at 22 with this number. Mark each oblique line to represent intervals of 10° by filling in the empty brackets - increasing to the left and decreasing to the right.

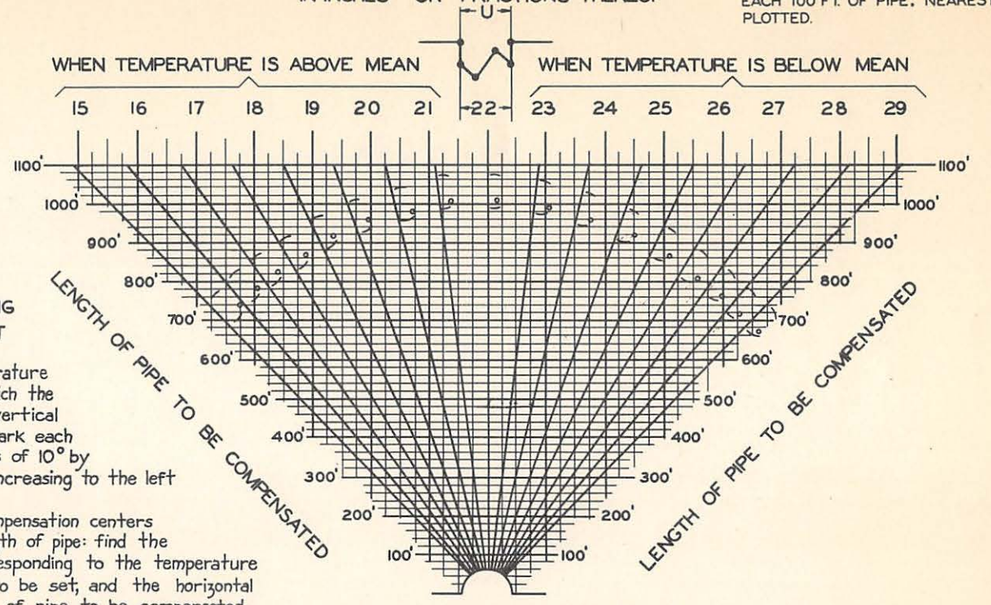
To determine the proper compensation centers for a given temperature and length of pipe: find the intersection of oblique line corresponding to the temperature at the time the compensator is to be set, and the horizontal line corresponding to the length of pipe to be compensated. Follow up the nearest vertical line and get reading on scale.

EXAMPLE

Find compensator centers for a pipe line 700 Ft. long, the temperature being 70° F.

Suppose the mean temperature at point of installation is found to be 50° F. In this case the 70° line will be the second to the left of the vertical. Find intersection of this line with horizontal line marked 700 Ft. Follow up the nearest vertical line getting a reading of 20⅞ inches for compensation centers.

COMPENSATION CENTERS "U" IN INCHES OR FRACTIONS THEREOF



COMPENSATION CHART

NOTE

VALUES OF "U" ARE BASED ON .08 INCH AS A COEFFICIENT OF EXPANSION FOR AN INCREASE OF 10°F. FOR EACH 100 FT. OF PIPE. NEAREST 1/16 IN. HAS BEEN PLOTTED.

NOTES

1. ALL CIRCUITS ARE SHOWN FOR SWITCHES HAVING RIGHT HAND SWITCH POINT NORMALLY CLOSED, SWITCH MACHINES FURNISHED FOR RIGHT HAND SWITCH POINT NORMALLY CLOSED MAY BE CONVERTED TO OPERATE SWITCH HAVING LEFT HAND POINT NORMALLY CLOSED AS FOLLOWS: INTERCHANGE EXTERNAL LEADS TO TERMINALS 5 AND 10 AND INTERCHANGE EXTERNAL LEADS TO TERMINALS B AND C. REVERSE INDICATION CONTROLLER CAMS.
2. OPERATION OF MOTOR CONTROL AND INDICATION CIRCUIT CONTACTS SHALL BE AS FOLLOWS:
   (a) MOTOR CONTROL CONTACTS 12-13 AND 24-25 MUST BE CLOSED WHEN SLIDE BAR IS MORE THAN ½ INCH FROM FULL NORMAL OR REVERSE POSITION.
   (b) CONTACT 24-25 MUST BE OPEN WHEN SLIDE BAR IS IN FULL NORMAL POSITION FOR RIGHT HAND SWITCH POINT NORMALLY CLOSED OR FULL REVERSE FOR LEFT HAND SWITCH POINT NORMALLY CLOSED.
   (c) CONTACT 12-13 MUST BE OPEN WHEN SLIDE BAR IS IN FULL REVERSE POSITION FOR RIGHT HAND SWITCH POINT NORMALLY CLOSED OR FULL NORMAL FOR LEFT HAND SWITCH POINT NORMALLY CLOSED.
   (d) INDICATION CIRCUIT CONTACTS 16-17, 18-19, 20-21, AND 22-23 ARE OPERATED BY SLIDE BAR MOVEMENT AS WELL AS POINT DETECTOR ROD AND MUST BE SO ADJUSTED THAT SLIDE BAR MOVEMENT WILL CLOSE THE OPEN MOTOR CONTROL CONTACT BEFORE THE CLOSED INDICATION CIRCUIT CONTACTS OPEN.
3. (a) CONTACTS 49-50 AND 51-52 ON M-2 MACHINE SHALL BE FURNISHED WITH LATCH REQUIRING MAINTAINER TO RESTORE CONTACTS TO NORMAL AFTER USE OF CRANK.
   (b) CONTACTS 49-50 AND 51-52 ON M-22 MACHINE OPEN WHEN SELECTOR LEVER IS PLACED IN HAND OPERATING POSITION AND CLOSE WHEN SELECTOR LEVER IS PLACED IN POWER OPERATING POSITION.
4. WHEN CONDITIONS REQUIRE TRAIN OPERATION BY SIGNAL INDICATION WHILE SELECTOR LEVER OF M-22 MACHINES ARE IN HAND OPERATION POSITION, THE SWITCH REPEATER CIRCUIT WIRING FOR M-22 MACHINES SHALL BE THE SAME AS FOR M-2 MACHINES IN ACCORDANCE WITH NOTE ON EACH SWITCH REPEATER CIRCUIT.

NOTES

METHOD OF CHECKING LOCKING TOLERANCES

1. LOCK THE LEVER WITH LEVER AGAINST WHICH IT IS TO BE CHECKED AND LIFT LATCH AS FAR AS POSSIBLE. WITH BOTH SLIDES PUSHED DOWN TO END OF GAGE AND WITH GAGE PARALLEL TO LATCH ROD PLACE LUG "A" ON TOP OF LATCH ROD PROJECTION AND PUSH GAGE DOWN UNTIL END RESTS ON TOP OF QUADRANT, FIGURE 1.
2. SET LATCH ON TOP OF QUADRANT AND PLACE LUG "B" ON TOP OF LATCH ROD PROJECTION AND PUSH GAGE DOWN UNTIL THE END RESTS ON TOP OF QUADRANT, FIGURE 2. DIFFERENCE BETWEEN POSITION OF GAGE IN FIGURE 1 AND FIGURE 2 AS READ ON SCALE IS THE DISTANCE BETWEEN BOTTOM OF LATCH ROD AND TOP OF QUADRANT WITH ALL SLACK TAKEN UP IN LOCKING.

USE OF GAGE ON G.R.S. TYPE ELECTRIC MACHINES

NOTES

METHOD OF CHECKING LOCKING TOLERANCES

NORMAL POSITION OF LEVER

1. PLACE LEVER IN FULL NORMAL POSITION AS SHOWN IN FIGURE 1 AND LOCK BY LEVER AGAINST WHICH IT IS TO BE CHECKED. PULL BOTH SLIDES TOWARD KNOB OF GAGE, PLACE GAGE PARALLEL TO LEVER, WITH END AGAINST MACHINE FRAME. PUSH SLIDES DOWN ON GAGE UNTIL LUG "B" RESTS AGAINST LEVER.
2. PULL LEVER OUT AS FAR AS POSSIBLE AS SHOWN IN FIGURE 2, MOVING LUG "B". SCALE READING IS LOST MOTION – NORMAL.

REVERSE POSITION OF LEVER

1. PLACE LEVER IN FULL REVERSE POSITION AND LOCK BY LEVER AGAINST WHICH IT IS TO BE CHECKED. MOVE LEVER TOWARD NORMAL POSITION AS FAR AS POSSIBLE AS SHOWN IN FIGURE 3. PLACE GAGE PARALLEL TO LEVER, WITH END AGAINST MACHINE FRAME AND PUSH SLIDES DOWN ON GAGE UNTIL LUG "D" RESTS AGAINST LEVER.
2. PULL LEVER OUT AS FAR AS POSSIBLE AS SHOWN IN FIGURE 4, MOVING LUG "B". SCALE READING IS LOST MOTION – REVERSE.
3. ON SOME MACHINES ON WHICH CABINETS HAVE BEEN CHANGED IT MAY BE NECESSARY TO USE THE GAGE EXTENSION TO TAKE REVERSE READINGS AND LUG "D" INSTEAD OF "B" USED ON NORMAL READINGS.
